AI Revolution.

Building and Governing the Hybrid Enterprise — 2nd edition

A book for leaders who already have AI agents in their processes and must decide who governs them, what they cost, and what to do with the time they free up.

Author	Pierre Matuchet
Foreword	Julie Ranty, co-founder and CEO of Pollen, former Managing Director of VivaTech
Published	October 31, 2026, in English and French (Révolution IA)
Formats	Paperback 5 × 8 in (347 pp.) and Kindle
ISBN (paperback)	979-8-1667-1903-4 (EN) · 979-8-1723-3933-2 (FR)
Royalties	All donated to Les Restos du Cœur, the French food charity

What changed in six months

The first edition prepared leaders for a disruption: AI was turning from a tool into an actor. Six months later, the disruption has happened. Agents are in the processes, the budgets and the org charts. The question is no longer "should we go?" but "who makes the trade-offs?" Intelligence is getting cheap. Judgment is not.

The thesis: delegate without losing agency

Hand authority to agents without losing the ability to understand, verify, learn, and take back control. Three questions every leadership team will have to settle:

→ **Where does the enterprise's intelligence live?** With you, or with your vendors. The models will be rented. The loops that make them useful (memory, rules, feedback from production) must stay yours.

→ **Who makes the trade-offs?** The machine, the vendor, the regulator, or leadership. Without instruments, decisions get made by default, and elsewhere.

→ **What do we do with the dividend?** Freed-up time evaporates unless someone decides where it goes: growth, quality, learning, or cost reduction owned as such.

Seven ideas

The hybrid enterprise: humans and agents producing together, and governed together. · **Calibrated delegation**: broad when the result is verifiable and the error reversible, narrow when judgment matters. · **The control tower**: see, test, allocate; one page per agent, one owner per page. · **The token and the dividend**: cost is managed; the dividend is decided. · **The enterprise's memory**: the loops that make intelligence useful accumulate with you, or with someone else. · **Human roles**: the accountable steward, the hybrid manager, the executive as architect. · **The programmable enterprise**: capabilities exposed and sold to humans and to their agents.

Six parts, 24 chapters

1. Understanding the disruption
2. Deploying and onboarding
3. Scaling without lock-in
4. Governing the hybrid enterprise
5. Transforming work and careers
6. The enterprise in the agent ecosystem

Quotes

> "The models will be rented. The loops will not."

> "There is the AI you talk about and the AI you actually use."

> "In the hybrid enterprise you are building, what have you decided never to delegate?"

Figures cited in the book

÷750	cost of a correct AI answer (GPQA) from spring 2024 to October 2026 — Ethan Mollick, One Useful Thing
6 to 1	agent hours per employee hour at Anthropic, August 2026 — The Anthropic Institute
27% → 9%	share of juniors in Anthropic's technical hiring since early 2025 — same source
−20%	employment of US developers aged 22–25 over two years — ADP, Stanford AI Index

The author

Pierre Matuchet is SVP IT & Digital Transformation at Adecco and a member of the Adecco Executive Committee. An engineer from École Centrale Paris (1991), he has lived through several disruptions from the inside: mobile at Voyages SNCF Technologies, whose first app became the platform that now carries most of SNCF's sales; social networks with Milky, the company he founded; and agentic AI at Adecco, where he runs agents in production across dozens of countries.

Print or digital review copy on request. Available for interviews, op-eds and talks in English and French.
